<b>1 Lagrange formulation of quantum field theory</b>	<b>3</b>
1.1 Recall the formalism of Lagrange . . . . .	3
1.1.1 Principle of least action . . . . .	3
1.1.2 Euler-Lagrange equations . . . . .	4
1.1.3 Lagrangian choice . . . . .	5
1.1.4 Hamiltonian formulation . . . . .	6
1.2 Basic principle of quantum field theory . . . . .	6
1.2.1 Free scalar field . . . . .	7
1.2.2 Free complex scalar field . . . . .	8
1.2.3 Complex scalar field in the presence of an external electromagnetic field . . . . .	8
1.2.4 Remark . . . . .	9
<b>2 Exercises</b>	<b>10</b>
<b>3 Symmetries and conservation laws</b>	<b>11</b>
3.1 Example of transformation . . . . .	11
3.1.1 Space-time transformation . . . . .	11
3.1.2 Global phase transformation ( $\phi(x_\mu) \neq \phi^*(x_\mu)$ ) . . . . .	12
3.1.3 Local phase transformation ( $\phi(x_\mu) = \phi^*(x_\mu)$ ) . . . . .	12
3.2 Noether's theorem . . . . .	12
3.2.1 Statement . . . . .	12
3.2.2 Demonstration . . . . .	13
3.3 Energy-Momentum Tensor of the scalar field . . . . .	18
<b>4 Exercises</b>	<b>20</b>
<b>5 Dirac equation</b>	<b>21</b>
5.1 Dirac's Hamiltonian . . . . .	21
5.2 The characteristics of Dirac matrices . . . . .	22
5.3 Standard representation . . . . .	25
5.4 Free Dirac equation . . . . .	26

	2
5.5 Physical interpretation of the negatives energies . . . . .	28
5.6 Current of free Dirac equation . . . . .	29
5.6.1 vector current and total charge . . . . .	31
5.7 Dirac equation in the presence of an external electromagnetic field . . . . .	31
5.8 Lagrangian of the complex spinor field . . . . .	32
5.9 Lagrangian of the complex spinor field in the presence of an external electromagnetic field. . . . .	33
<b>6 Exercises</b>	<b>35</b>
<b>7 Somme References</b>	<b>40</b>
