

## Exemple

--- Database(**SalesmanagementDB**): Client – Order – Invoice (Access)

### Objective

This database is designed to manage the process of sales and billing within a company. It allows users to store customer information, record orders, and generate invoices automatically. ---

### Main Tables

(**Customer**) Table Purpose: Stores information about customers.

#### **Fields:**

1. ClientID (Primary Key)
2. ClientName
3. Address
4. City
5. Phone-
6. Email

**(Order)** Table Purpose: Stores details of client orders.

**Fields:**

- 1.OrderID (Primary Key)
- 2.TotalAmount
- 3.OrderDate
- 4.ClientID (Foreign Key linked to Client table)

3. **(Invoice)** Table Purpose: Stores billing information for each order.

**Fields:**

- 1.InvoiceID (Primary Key)
- 2.InvoiceDate
- 3.PaymentStatus
- 4.Amount
- 5.OrderID (Foreign Key linked to Order table)

## Simple Explanation: Creating a Database, Tables, and Relationships in Access

- ✿ 1. Create a New **Database** Open Microsoft Access. Click on Blank Database
- ✿ Write the name of your database, for example:  Sales\_Management.accdb Click Create.
- ✿ Access will open a new empty database file.
- ✿ .  2. Create **the Tables** Each table stores a specific type of data.
- ✿ **Example in our project:**
- ✿ **Customer Table:** stores customer information
- ✿ **Order Table:** stores order information
- ✿ **Invoice Table:** stores invoice information

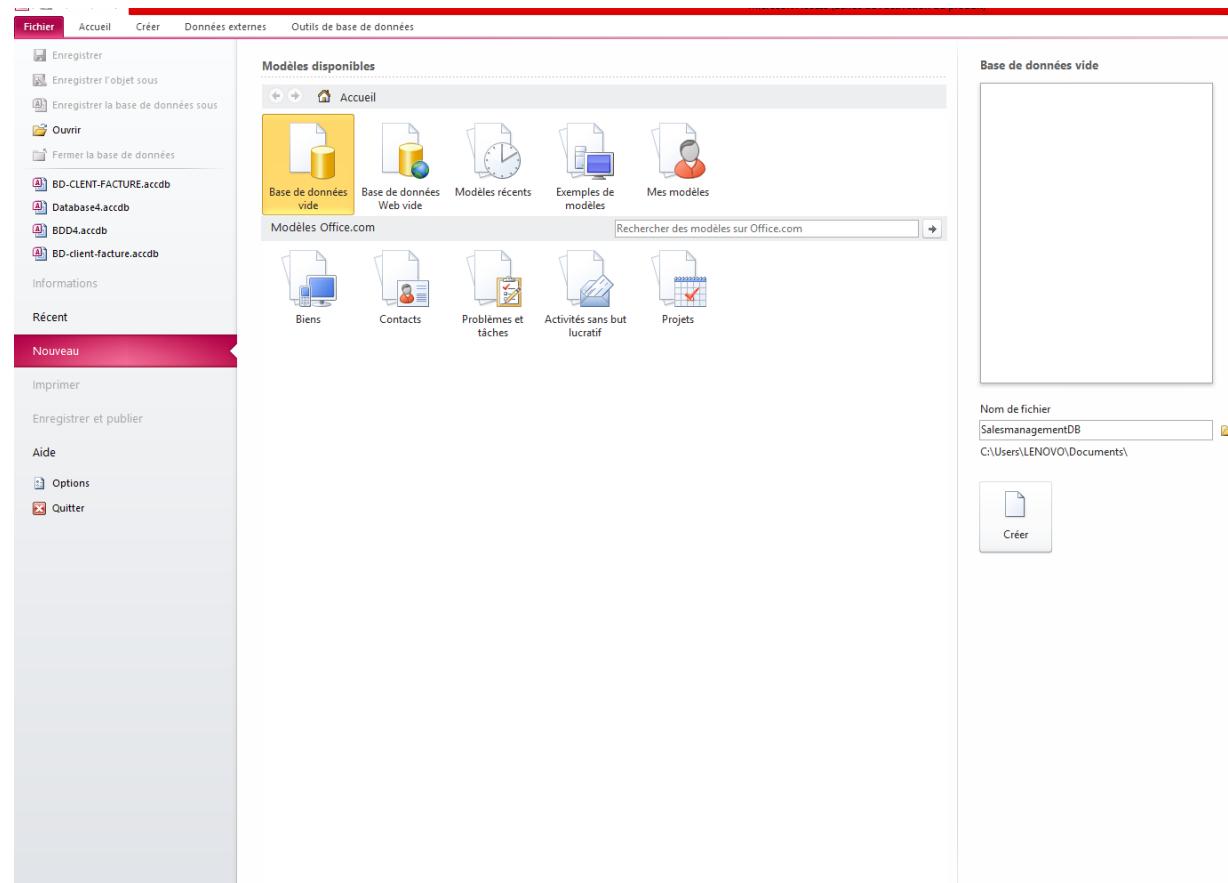

Steps: Go to the Create tab → choose Table Design. Add your fields (columns): Example for customer t table: CustomerID

NuméroAuto (Primary Key) customerName → Short Text City → Short Text Phone → Numérique Text Email → Short Text Save the table with the name **Customer**. Repeat the same for **Order** and **Invoice Table**.

- 3. Create **Relationships** Between Tables Relationships link the tables together using common fields. Steps: Go to the Database Tools tab → click Relationships. Add your three tables: **Customer**, **Order** and **Invoice**.
- Drag CustomerID from **Customer Table** to CustomerID in **Order Table**.. → Choose Enforce Referential Integrity → Click Create. Then drag OrderID from **Order Table** to OrderID in **Invoice Table**.. → Click Create again. Save your relationships.

Now your database is ready — all tables are connected properly

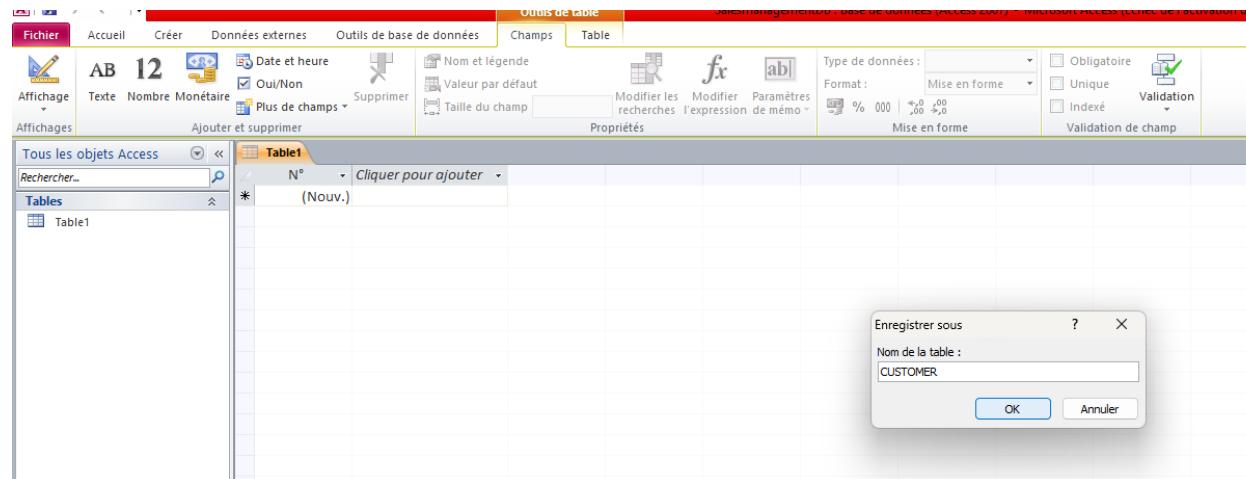

## 1. Create a New Database

✿ . 2. Create the Tables Each table stores a specific type of data.

1. (Customer) Table Purpose: Stores information about customers.
2. Fields: Customer ID (Primary Key) -Customer Name -Address -City -Phone -Email

Tables CUSTOMER

**CUSTOMER**

Nom du champ	Type de données
CustmerID	NuméroAuto
CUSTOMERNAME	Texte
ADRESS	Texte
CITY	Texte
PHONE	Numérique
EMAIL	Texte

2. (Order) Table Purpose: Stores details of client orders. Fields: OrderID (Primary Key)- OrderDate -ClientID (Foreign Key linked to Client table) -TotalAmount

Microsoft Access 2010 ribbon interface showing the 'Outils de table' (Tools for tables) tab selected. The 'Création' (Creation) group is active, displaying various tools for managing tables.

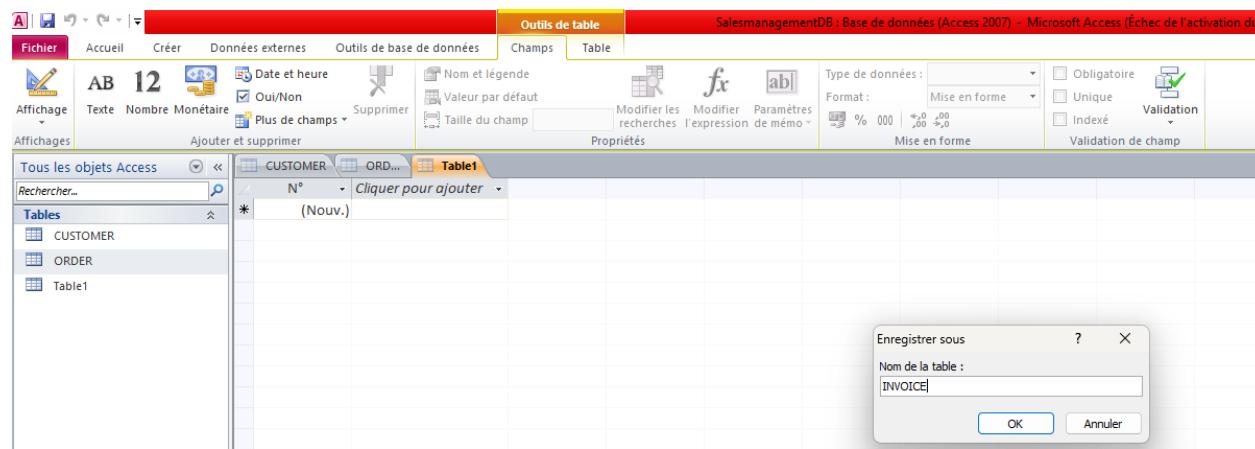

Toolbars and buttons visible include:

- Accès** (Access): Affichage (View), Clé primaire (Primary Key), Générateur (Generator), Tester les règles de validation (Test validation rules), Insérer des lignes (Insert rows), Supprimer les lignes (Delete rows), Modifier les recherches (Modify search).
- Outils** (Tools): Feuille de propriétés (Properties sheet), Index (Index), Afficher/Masquer (Show/Hide), Créer des macros (Create macros), Renommer/supprimer une macro (Rename/Delete a macro), Champ, enregistrement et événements de table (Field, record, and table events), Relations (Relationships), Dépendances d'objet (Object dependencies), Relations (Relationships).

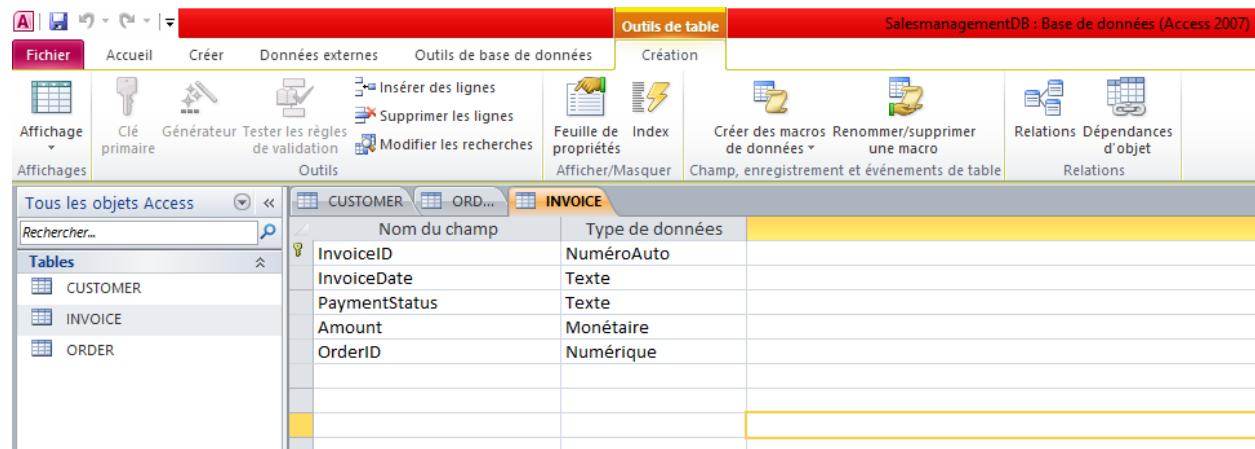

The main workspace displays the 'CUSTOMER' and 'ORDER' tables. The 'CUSTOMER' table is selected, showing the following fields:

Nom du champ	Type de données
OrderID	NuméroAuto
OrderDate	Date/Heure
TotalAmount	Texte
CustomerID	Numérique

The 'Tables' pane on the left lists 'CUSTOMER' and 'ORDER'.

3. Invoice (Facture) Table Purpose: Stores billing information for each order. Fields: InvoiceID (Primary Key) -InvoiceDate- OrderID (Foreign Key linked to Order table) -PaymentStatus- Amount

Nom du champ	Type de données
InvoiceID	NuméroAuto
InvoiceDate	Texte
PaymentStatus	Texte
Amount	Monétaire
OrderID	Numérique

### 3. Relationships

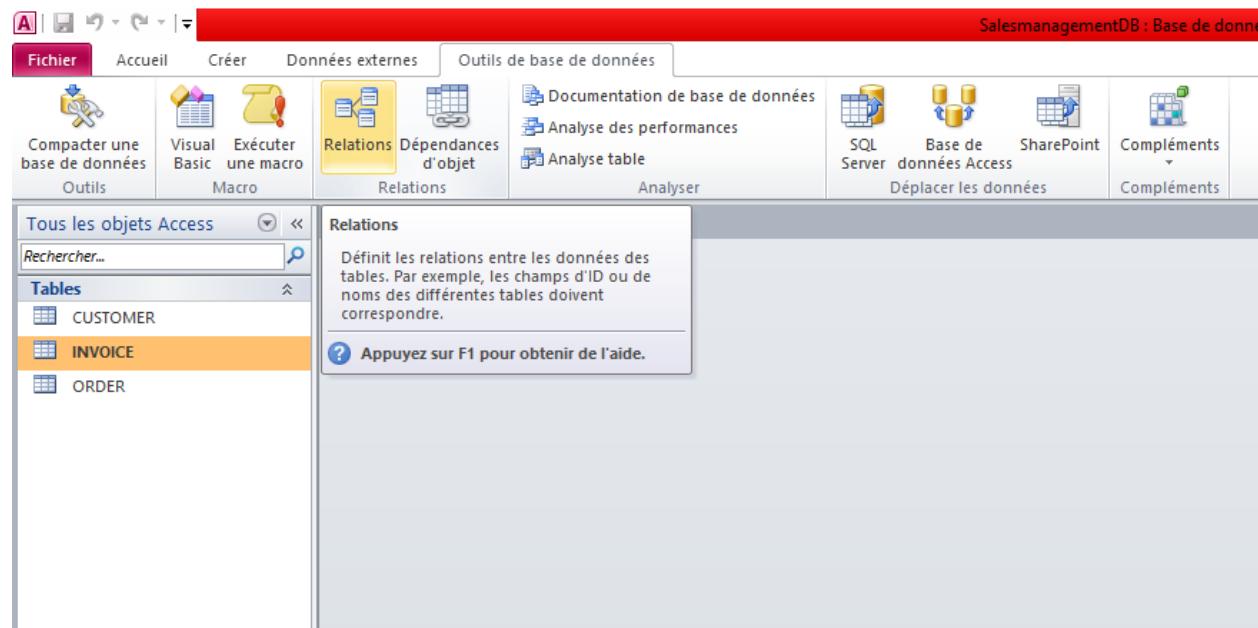

- Customer → Order: One Customer can make multiple orders (One-to-Many relationship).
- Order → Invoice: Each order can generate one or more invoices depending on payment conditions.

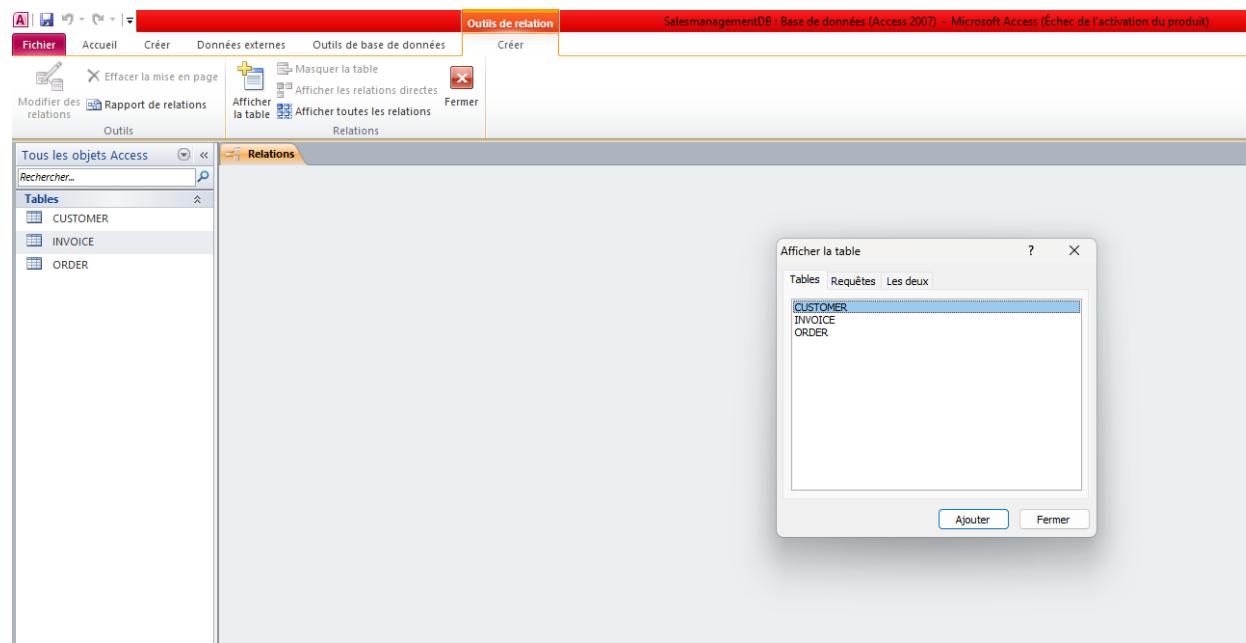

- Referential integrity should be enforced to maintain data consistency.

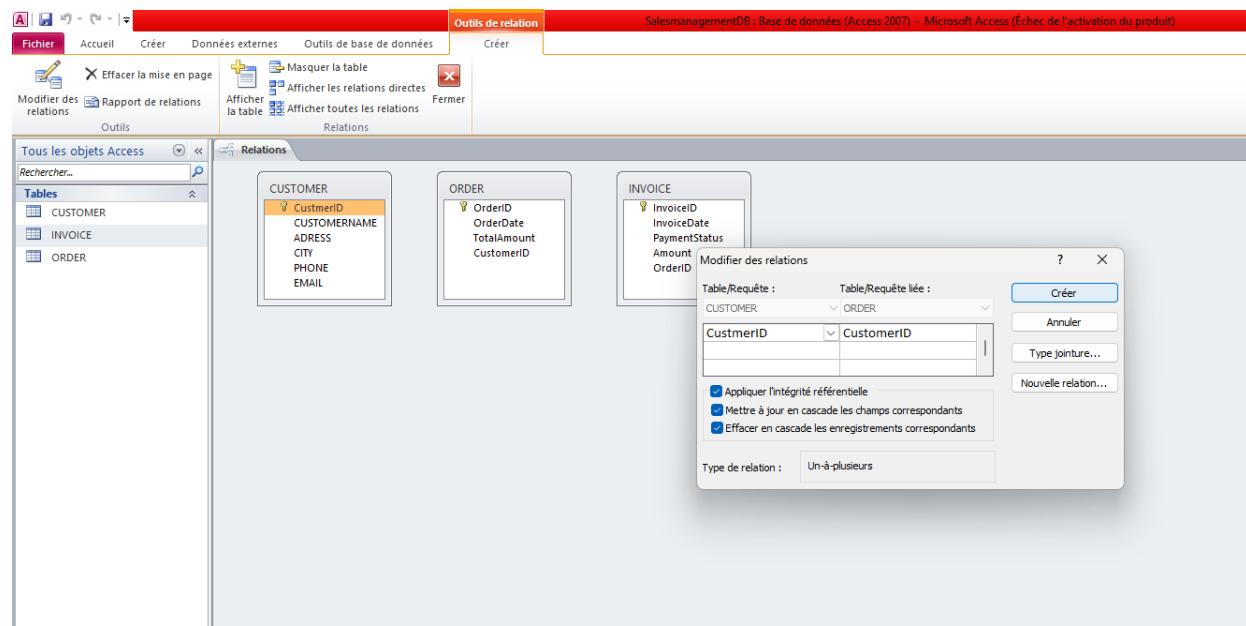

## Relationships

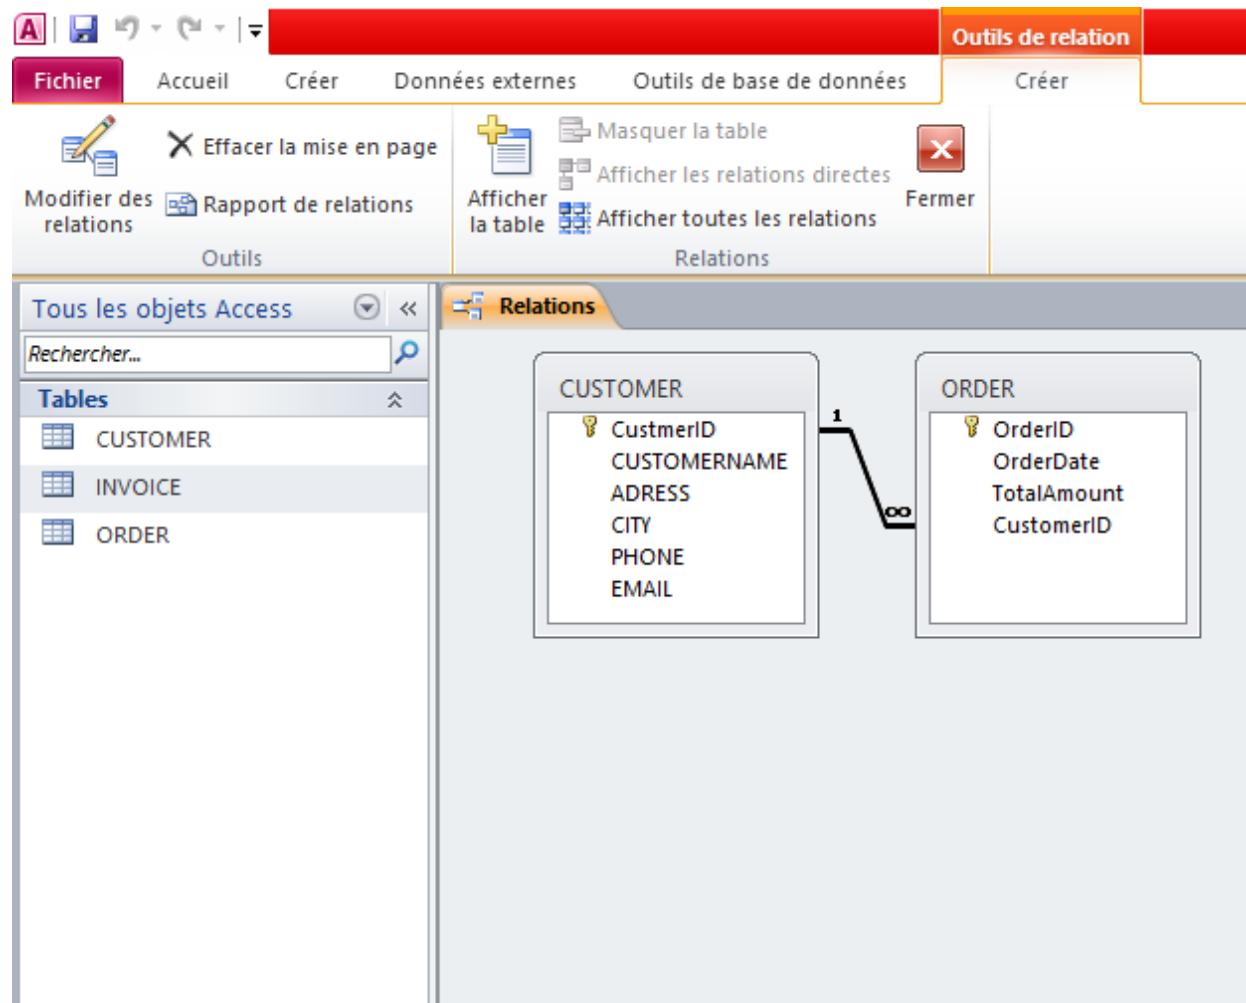

- ✿ Create **Relationships** Between Tables Relationships link the tables together using common fields. Steps: Go to the Database Tools tab → click Relationships. Add your three tables: **Customer**, **Order** and **Invoice**.
- ✿ Drag CustomerID from **Customer Table**. to CustomerID in **Order Table**. → Choose Enforce Referential Integrity → Click Create. Then drag OrderID from **Order Table** to OrderID in **Invoice Table**. → Click Create again. Save your relationships.

Now your database is ready — all tables are connected properly

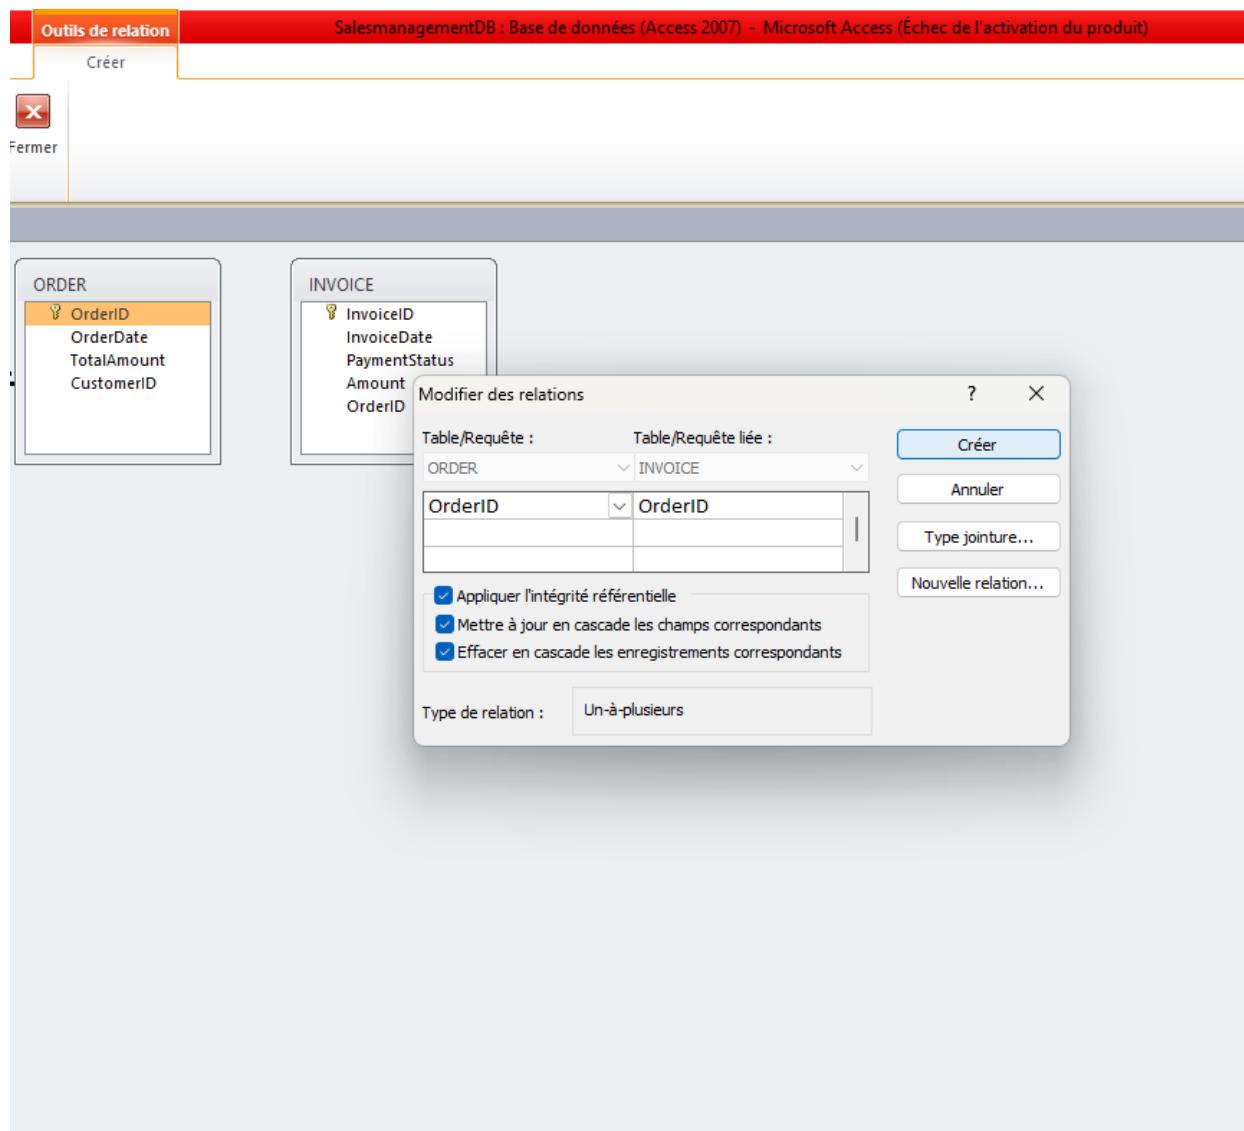

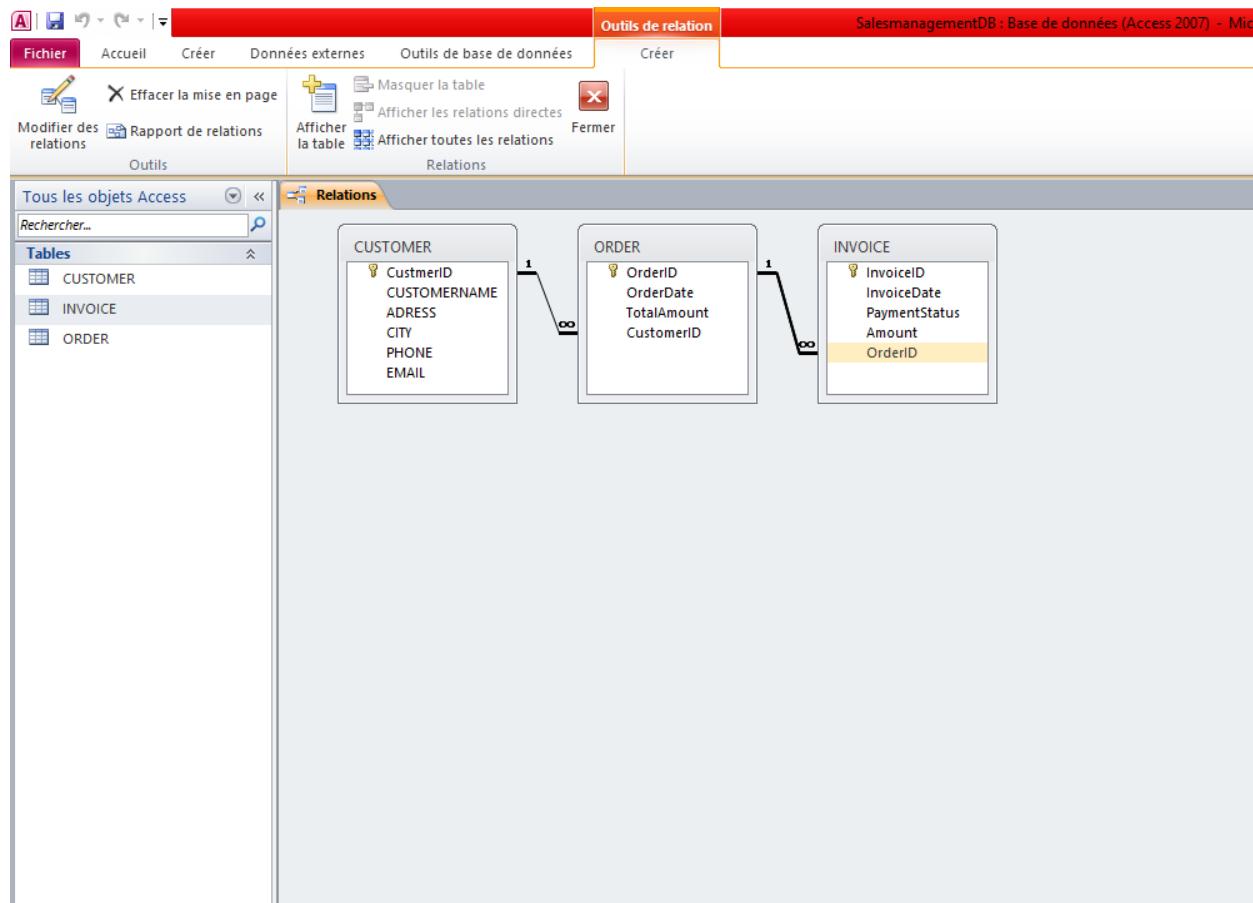

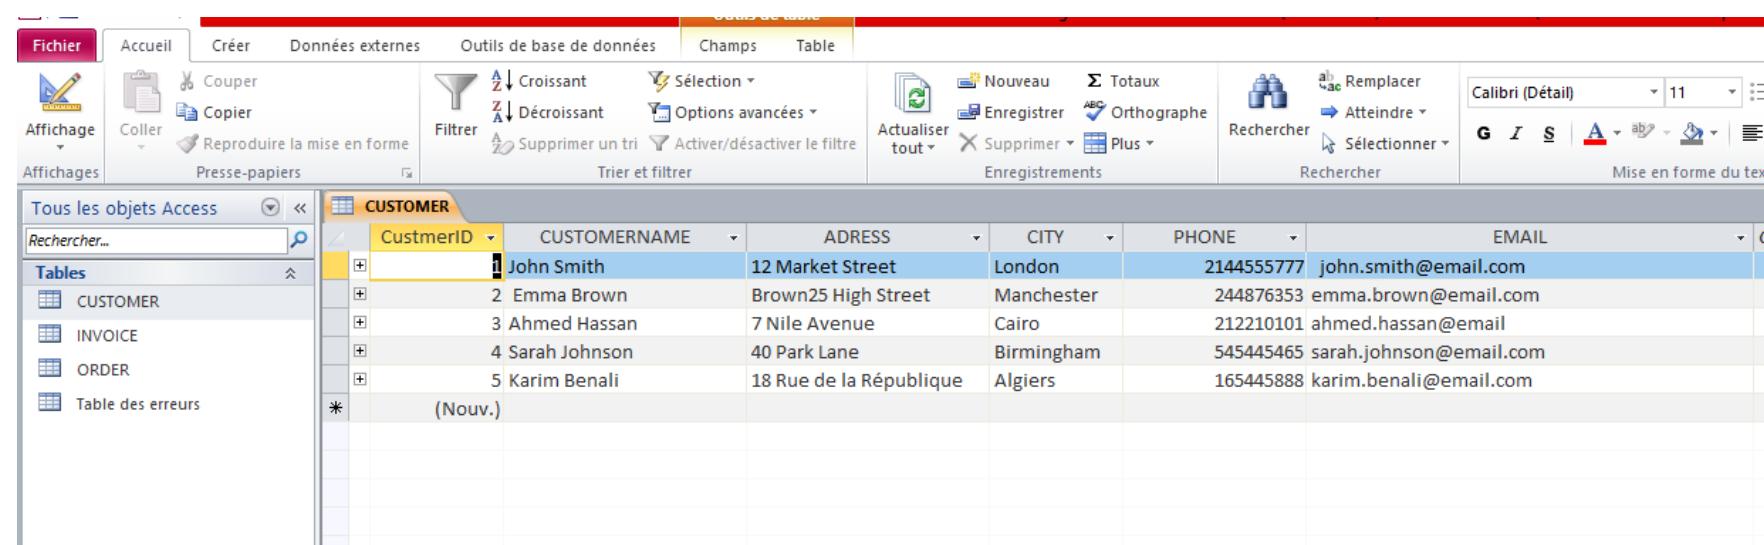

- Customer → Order: One customer can make multiple orders (One-to-Many relationship).

- Customer → Order: One Customer can make multiple orders (One-to-Many relationship).
- Order → Invoice: Each order can generate one or more invoices depending on payment conditions.

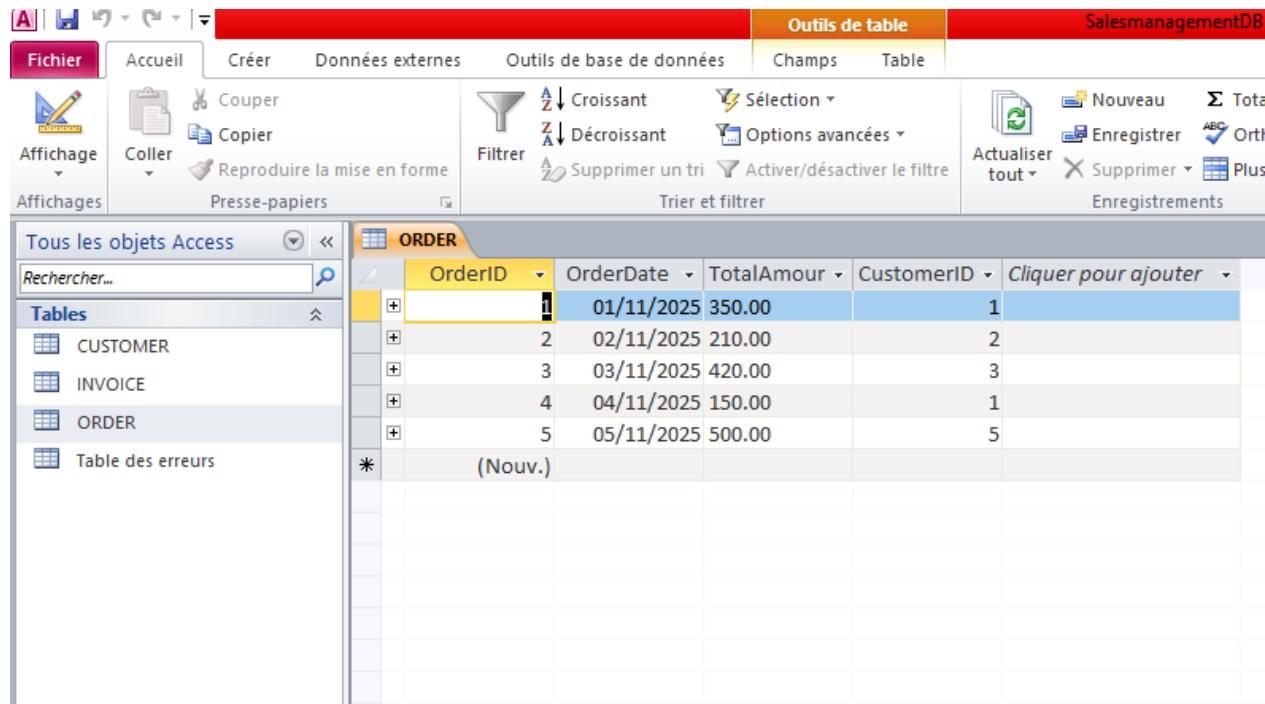

## Customer Table Data

The screenshot shows the Microsoft Access application interface with the CUSTOMER table open. The table structure includes fields: CustmerID, CUSTOMERNAME, ADRESS, CITY, PHONE, and EMAIL. The data is as follows:

CustmerID	CUSTOMERNAME	ADRESS	CITY	PHONE	EMAIL
1	John Smith	12 Market Street	London	2144555777	john.smith@email.com
2	Emma Brown	Brown25 High Street	Manchester	244876353	emma.brown@email.com
3	Ahmed Hassan	7 Nile Avenue	Cairo	212210101	ahmed.hassan@email.com
4	Sarah Johnson	40 Park Lane	Birmingham	545445465	sarah.johnson@email.com
5	Karim Benali	18 Rue de la République	Algiers	165445888	karim.benali@email.com
*	(Nouv.)				

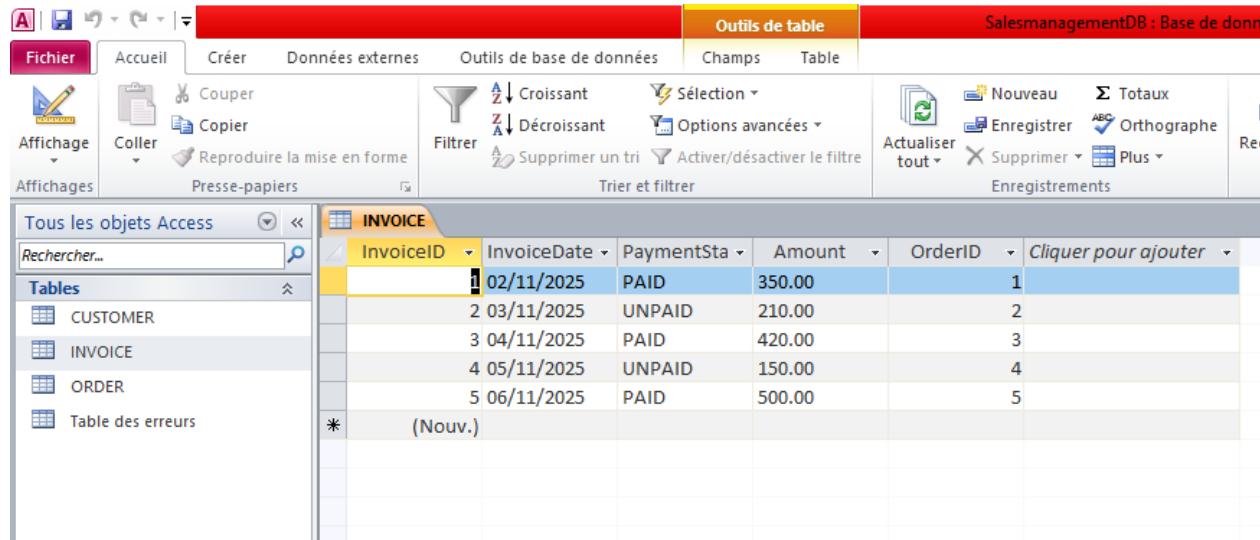

## OrderTable Data

The screenshot shows the Microsoft Access interface with the 'ORDER' table selected. The table contains five rows of data with the following details:

OrderID	OrderDate	TotalAmour	CustomerID
1	01/11/2025	350.00	1
2	02/11/2025	210.00	2
3	03/11/2025	420.00	3
4	04/11/2025	150.00	1
5	05/11/2025	500.00	5
*	(Nouv.)		

## . Invoice Table Data

The screenshot shows the Microsoft Access application interface with the 'INVOICE' table open. The ribbon at the top is visible with the 'Outils de table' tab selected. The left pane shows the 'Tables' list with 'CUSTOMER', 'INVOICE', 'ORDER', and 'Table des erreurs' selected. The main area displays the 'INVOICE' table data in a grid format.

InvoiceID	InvoiceDate	PaymentStatus	Amount	OrderID	Cliquer pour ajouter
1	02/11/2025	PAID	350.00	1	
2	03/11/2025	UNPAID	210.00	2	
3	04/11/2025	PAID	420.00	3	
4	05/11/2025	UNPAID	150.00	4	
5	06/11/2025	PAID	500.00	5	
*	(Nouv.)
